

Remote file and printer access from Windows

The changeover to Windows 2000 has progressed to the point where you can access your Windows file structure over the network. You can also send print jobs to any of the TCC printers for the usual charges.

You can access files and printers from your personal machine whether it runs Windows, Linux, or MacOS X.

For detailed procedures, see this Web page:

<http://www.nmt.edu/tcc/remote/>

Usenet changes

The TCC will be changing news service providers at the end of May. The new provider will allow us to supply more lists, greater retention times and overall better quality service to users. The new news server can be accessed via the same DNS name, `news.nmt.edu`.

Linux moving to a Red Hat distribution

The TCC is in the process of testing and preparing to move to RedHat as its Linux distribution this summer. This is to bring students more features and improve system manageability. During this changeover we encourage users to let us know what they think of the system so we can continue to improve it.

Please let us know about any problems or limitations you may run into during this implementation process via:
