

# TCC Hotline

New Mexico Institute of Mining & Technology  
Tech Computer Center

November 30, 2005

## 3GHz PCs in Speare 4

34 new PCs that run at 3GHz will be installed in Speare 4 over the Christmas break. Three of the new PCs are currently available in Speare 9 for testing. Since we had to generate a new software template for the new PCs, please test the PCs in Speare 9 and report any problems to the User Consultants in Speare room 5 or at 835-5437.

## WWW Subdirectories

Any TCC user with their web pages residing in their www subdirectory should be aware that the www subdirectory is deprecated and the public\_html subdirectory should be used instead. Currently no web scripts can run from the www subdirectory. Where an account has a www subdirectory but NO public\_html subdirectory, the TCC, after consultation with the Student Association and the Graduate Student Association, will run a script, on December 21, that renames the www subdirectory to public\_html and then create a soft link from www to public\_html.

## Email not Backed Up

As requested by the Student Association and the Graduate Student Association, unread email will not be backed up. If you read an email message and save it to a file, it will however be backed up. This recommendation is a continuation of a long standing TCC policy.

## Software for Spring 2006

We are starting the construction of the Microsoft template of software that will be installed on the TCC computers for the Spring 2006 semester. The list of planned software for the Spring 2006 Semester can be found at (please note that this page is only viewable from an NMT IP address:

<http://www.nmt.edu/tcc/sw/xp.html>

If you need additional or different software, please notify us by December 15, 2005. Requests received by December 15 will be installed at no cost. Requests received after December 15 will be charged for the installation and there is no guarantee that the software will be ready for the Spring semester. The following major software will be upgraded:

1. Matlab **7.0.4 R-14 SP3**
2. Arena 10
3. Adobe CS 2
4. Ansys 20.0
5. ArcGIS 9.1
