Moodle 2.2
The current Moodle server is running version 1.9 of the software. We plan on upgrading that server to version 2.2 for the Fall 2012 semester. To prepare for the change, we have installed a Moodle TEST server with version 2.2 of the software for users to begin testing. If you would like to experiment with this TEST server, please send email to cms_master@nmt.edu to create an account for testing. We have revised the instructor documentation located at http://infohost.nmt.edu/tcc/help/pubs/moodle22/mooteach/mooteach.pdf and personal training classes are available by request to cms_master@nmt.edu.

Spring Break
The TCC servers will be down for software upgrades on Monday March 12 during Spring Break. The firewall will be down from 7:00-8:00, Moodle 1.9 from 8:00-12:00, and Dbhost from 8:00-12:00. The following services will not be available during those times: mysql, oracle, and the ticket system.

Google documents and Phishing
Some users have recently received email that asked them to open a document or web page located at Google. These documents or web pages then asked the user to enter their email address at NMT and their PASSWORD. These emails are phishing attempts and you should NEVER provide your password to anyone.

Speare 5 closed on Sundays
Room 5 in the Speare building will no longer be open on Sundays. Users may continue to utilize the computers in Fidel 130 and Library 208 on Sundays.

Postini Anti-Spam
Over Spring Break the TCC will change our email server so that all outgoing email will be routed through the Postini anti-spam filter. This should help protect against users that provide their password to spammers.
